

Testimonials for Walser® Matrices

Jiri Proch, PhD, Tulln/Austria

"Walser Matrices are the second greatest achievement after the invention of the wheel. As the chief purchaser of the Lower Austrian Regional Health Insurance I've searched really long, but there is nothing that comes close to it on the whole market: Ideal points of contact, very good anatomy and sensational quickness. A very important point especially in children. I recommend Walser Matrices to all physicians who settle down with a private clinic, too."

Niels Herholz, DDS, Kiel/Germany

"Tried everything out, but Walser Matrices is the best system. I must seldom use wedges."

Nina Hartmann, DDS, Darmstadt/Germany

"I met the Walser Matrices first at the handing over by the predecessor of my clinic and thought: There's nothing else at all so stunning! Approximal points perfectly without reworking by 90 percent! They are easy to place, with the X-form you can put adjacent fillings. For each filling there is a suitable matrix, such as the No. 10c for single-sided deep caries. So I have a tray with the complete system of all the matrices in every treatment room!"

Richard Turner, DDS, Gray/USA

"Sure, I can vouch for the fact that Walser Matrices are a huge time saver, whether restoring individual teeth, or restoring quadrants at a time! They are easily placed and removed in one step, often not requiring wedges due to the spring pressure. I reach for them daily."

Dr. Ivana Kules, Ivanic Grad/Croatia

"The biggest advantage is speed: Applied in a couple of seconds, no challenge, the matrix fits around the tooth tightly, there is no risk of contamination with blood or saliva, everything is clean and tidy. There is no surplus of material, and you almost always get a nice contact point on the form. Equally well for amalgam and composite fillings: I recommend Walser Matrices to all of you with enthusiasm. Makes it 100% easier to work!"

Bronislava Jakovkin, diploma-stomatologist, Kiel/Germany

„Best matrix system ever.“

Mohamad Jacobs, DDS, Düsseldorf/Germany

"With Walser matrices one achieves top results in all situations without a lot of rework. Whether MOD, especially deep caries or caries under gums: regardless of the tooth shape you always have exactly the right matrix. Particularly I'm excited about the X-form: occlusal-distal and mesial-occlusal really great fillings in only one appointment. The contact point is controlled perfectly with only one wooden wedge - something that isn't achieved by any other system. And the longtime using of every single matrix comes in addition."

Tom C. Schwartzkopff, DDS, Uetersen/Germany

"With the Walser Matrices it is very easy to design the optimal approximal point. They keep tightly on the tooth and thus they are suitable for the use of composites and advanced materials, while other sectional matrix systems sometimes fail by high tamping pressure. They are easy to apply and wear out very little. Moreover, you can work up Walser Matrices very easy and use it for a very long time."

Joseph Sonshine, DDS, Toronto/Canada

"After using just one of the Walser matrices, I have not used any more Tofflemires. The Walser matrices are very thin and adapt very well to the tooth surfaces due to their design. They are much more comfortable from the patient's perspective and easy to apply. It is even possible to restore two adjacent caries with one Walser matrix and establish a good contact area. These matrices are meant to be sterilized and reused and there is one particular matrix I have used over 40 times and it is still great. In all these 27 years I have seldom seen a device which makes the placing of restorations much easier while yielding excellent results. I urge all members of the profession to try this unique matrix system."

Wolfgang Gonser, PhD, Starnberg/Germany

"I'm very happy with it: They apply very well and quickly. Because of that, the treatment is very well accepted by the patients, especially children always know to appreciate speed."

Christine Albinger-Voigt, DDS, GZM, Bad Homburg/Germany

"Walser Matrices are placed very fast, not the slightest comparison with the systems with the wedge included. The matrix is already on the tooth very well by itself and provides a good contact point. One very seldom needs wedges there. It holds the cotton rolls tight, where I need them, this is a very pleasant thing."

A. Voicu David & Svetlana David, DDS, Arad/Romania

"We have been working with pleasure with the Walser Matrices since 1984, when we finished the Faculty of Dentistry at the Medicine Institute of Timisoara, Romania. Since 1992 we and not to mention more than 7.500 patients are very satisfied and happy with Walser Matrices, for the excellent design, the good marginal seal, the large variety of shapes, the easy-to-use and the rapidity of handling. Never we will quit the use of Walser Matrices, considering the high quality of restorations obtained with it during our 30 years of professional dental experience."

Carola Urwantschky, PhD, Neu-Ulm/Germany

"I am extremely enthusiastic about Walser Matrices. The simple handling, the good adaptation to the tooth. I also rarely need wooden wedges, the good shaping of the contact point by the matrix is essential for me. The cotton roll holder is also fantastic, the tongue does not do what she wants there. Papilla bleedings rarely happen and through this that the matrix seals up with sliding at once, it does not come to bleeding into the cavity. Since I use Walser matrices, I am always surprised why there are still other systems at all."

Elke Noelke, PhD, Wuppertal/Germany

"I get along with it fantastically, because Walser Matrices are applied on the tooth by spring force perfectly. Even the assistants are very excited because the cotton roll holder holds the saliva better than any other system. And for children the X shape is ideal."

Frank Konowski, PhD, Hamm/Germany

"I have been working almost exclusively with Walser Matrices for the last twenty years. They last as good as forever. I don't know a better system and if you have some practice, then a Walser Matrix is applied within seconds. With the No. 24 for terminal teeth you have unbeatable space in the stoma, place it over the rubberdam carefully and then you do not need the rubberdam clamp any more, the dam is fixed from the Walser Matrix."

Birgit Fuchs, DDS, Schmerbach/Germany

"I was very pleasantly surprised. Not only that Walser Matrices are very easy to handle and quick to place, also that the matrix fixes the cotton rolls in place is thrilling. I place it directly on the rubberdam, the clamp is actually no longer needed then."

Susanne Hüttner, DDS, Leipzig/Germany

"I am absolutely thrilled. Like all dentists I have sought the perfect system - this hasn't let me down!"
